

AURA™

The first automated, point-of-care disinfection device utilizing powerful disinfectants in a patented new process. Broad material compatibility with broad-spectrum efficacy. Zero occupational exposure to chemical disinfectants. Improved sustainability. EPA registered. EPA List N disinfection at the press of a button.

Advancing Patient Safety

Then

Hospital linens were frequently found to be a source of contamination causing outbreaks of yellow fever, typhoid and TB¹

Now

Modern hospital laundries use scientific advancements in water treatment, chemistry and process control to achieve up to a 6-log reduction

Until the 1940s the effects of scattered radiation were poorly understood, leading to injury and fatalities for patients and healthcare workers²

The application of improved technology has shielded both patients and clinicians from radiation hazards

Studies show disinfectants pose health & environmental risks. Current practices are costly, time consuming & can be ineffective when directions for use are not followed.

AURA™ revolutionizes the way non-critical medical devices and point of care items are disinfected

Our cost effective monthly subscription includes **AURA**, **AURA-D** cartridges, service and maintenance

The AURA™ Process

Convenient Plug-and-Play Set-Up

Plug into any standard outlet. Insert the **AURA-D** cartridge and you're ready. No venting required; only clean air remains.

Mix & Match

Place combinations of non-critical devices, equipment, and/or personal items inside.

Just Push One Button-It's Automated

Simply close the door and push start. **AURA** does the rest using our patented application of activated oxygen and hydrogen peroxide.

Walk Away

No need to monitor contact time. **AURA** automatically achieves total disinfection and visually signals when the cycle is complete.

Exposure Free

Keep yourself and your patients safe from chemical exposure. **AURA** automatically neutralizes the disinfectant.

Multiple Organisms

No more guessing about which wipe to use. **AURA** controls listed microorganisms with broad material compatibility.

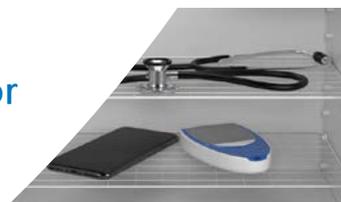

Automated

AURA's process is fully automated with visual indicators and no audible alarms.

No Residue

AURA won't damage your equipment or cloud device screens.

Automated Quality Controlled Disinfection using processes similar to SPD

Introducing . . . **AURA™**

AURA disinfects using process controls and efficacy validation similar to those found in SPD.

AURA-D cartridge is an EPA registered hospital disinfectant and an EPA List N disinfectant for use against SARS-CoV-2.

Disinfection . . . done right

4020 Lake Washington Blvd. N.E.
Suite 300, Kirkland, WA 98033
www.sterifre.com

AURA-D Cartridge is only for use in conjunction with the **AURA** Automated Disinfection System.

AURA Automated Disinfection System is intended to disinfect hard non-porous surfaces of reusable non-critical medical devices and general-use items used in healthcare facilities.
